

Digital literacy is the key to Internet security

Law enforcement officers will carry out a set of measures aimed at raising public awareness of cyber threats and methods of countering them, developing skills for safe behavior in the digital environment, and taking effective measures to prevent crimes in this area.

Special attention is planned to be paid to vulnerable categories, such as minors and the elderly. The campaign also provides for extensive information and explanatory work on the procedure for the circulation of digital signs (tokens), potential risks and legal norms governing this area.

The Ministry of Internal Affairs invites you to take part in our events and improve your knowledge in the field of cybersecurity!
