

"Metrology and Standards: The Path to Quality"

As part of World Quality Day 2024, from November 11 to 16, the Polotsk CSMS hosted the exhibition

"Metrology and Standards: The Path to Quality".

The enterprise's metrological service presented a variety of measuring instruments and useful literature on metrology. The standardization department prepared various technical regulations, booklets and magazines "Metrology" and "Standardization". For all those wishing to get acquainted with the work of the center, booklets with information about our areas were prepared.

The exhibition presented measuring instruments for various fields - from linear-angular and electrical to medical and heat engineering. These devices are used both in industry and in everyday life.

Also on the stand were photo exhibits showing the workplaces of our employees.

The key role in the exhibition was played by a video sequence characterizing the activities of the Polotsk CSMS within the framework of the Year of Quality 2024, presented in the form of three-dimensional models (holograms) and video content demonstrated on a holographic projector-fan.
